

## Gas Discharge Tubes

### CG Series

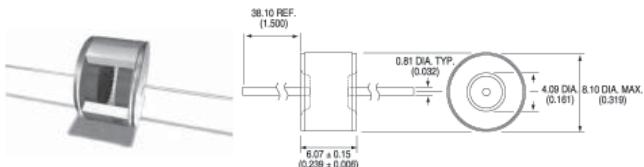

Littelfuse highly reliable CG/CG2 Series GDTs provide a high degree of surge protection in a small size ideal for board level circuit protection.

GDTs function as switches which dissipate a minimum amount of energy and therefore handle currents that far surpass other types of transient voltage protection. Their gas-filled, rugged ceramic metal construction make them well suited to adverse environments.

The CG/CG2 series comes in a variety of forms including surface mount, core, straight and shaped leads, to serve a variety of mounting methods.

The CG Series (75-110V) is ideal for protection of test and communication equipment and other devices in which low voltage limits and extremely low arc voltages are required.

The CG2 Series (145V-1000V) is ideal for protecting equipment where higher voltage limits and holdover voltages are necessary.

#### Technical Parameters At Conditions... CG90L CG2 230L

Breakdown Voltage		500V/s		
MIN		72	195	[VDC]
TYP		90	230	[VDC]
MAX		108	265	[VDC]
Breakdown Impulse	100V/us	400	600	[VDC]
Insulating Resistance	50V	1010	-	[Ohm]
	100V		1010	[Ohm]
Rated Current/Voltage	1MHz	1	1	[pF]
Max. Impulse Current		20	20	[kA]
Lifetime	500A (10/1000us)	1000	1000	[breakdowns]
	20kA (8/20us)	5	5	[breakdowns]
Follow On Current		20	20	[A]

Part No.	Ord. No.
S CG90L	9333
S CG2 230L	50454

## Polyswitch Resetable Fuses

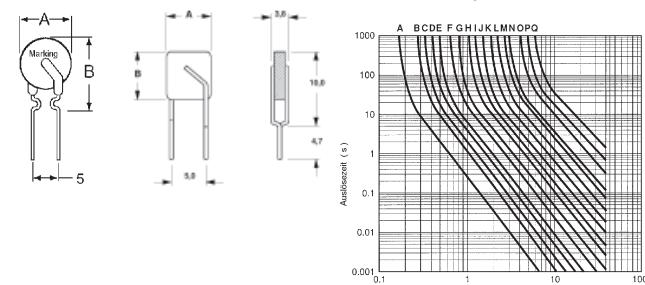

PolySwitch devices are polymeric positive temperature coefficient (PPTC) devices, which are used to help protect against harmful overcurrent surges and overtemperature faults. Like traditional fuses, these devices limit the flow of dangerously high current during fault conditions. However, the PolySwitch device resets after the fault is cleared and power to the circuit is removed, thereby reducing warranty, service and repair costs.

Typical applications for PolySwitch devices include computers and peripherals, rechargeable batteries, power supplies, appliances & HVAC systems, automotive electronics, medical and telecommunications equipment.
